

CollectIT

WHAT IS CollectIT

Throughout every product lifecycle, there are frequent needs to share product design information outside of your product lifecycle management (PLM) system. Information sharing can be challenging when using a manual extraction, whether file downloads, conversions to PDF format, screenshots, or re-keying data for each part or Bill of Materials (BOM).

Clover CollectIT is a vendor-neutral, web-based file management application that allows users to extract, package, and securely distribute PLM files and data. You can quickly share product information with employees, vendors, and clients including part and BOM representations, related CAD files, and technical documents with the creation of any project, product or part to support a Model Based Enterprise (MBE).

Why CollectIT

CollectIT provides critical product information at any point during a product lifecycle to improve collaboration and decision making across your organization, vendors and clients.

- Creation of Bid Package or Product
- Specification for delivery to vendor as part of a quoting process
- Provide Technical Data Package (TDP) or End Item Data Package (EIDP) documentation for a product deliverable
- Access to PLM product data for non- PLM users for your extended enterprise

Save Time and Effort by Simplifying your Product Sharing Process

FEATURES

- Quickly parse and select complex BOMs, CAD files, ECOs, data and other technical documentation
- Convert part, BOM or other metadata stored on PLM forms into readable Microsoft Word or PDF files using customizable templates
- Package Definition Templates describe which objects, files and data will be extracted for each type of technical package
- A full package manifest allows the reader to easily find files and data in the exported package
- Optional inclusion of source product data in JSON format for destination import or other use
- Provide custom templates including MIL-STD-31000B requirements to support Government and MBE standards

Benefits

- Reduce costs by providing product information to non PLM users, saving time and money
- Increase productivity by reducing the time and effort to find and extract part files and documentation
- Enhance collaboration with easily shareable data packages across the enterprise and supply chain
- Increase quality for up-to-date file sharing to reduce errors in production, maintenance, sales, and suppliers
- Improve decision making with accurate and current information to key stakeholders

Enhance the Digital Thread and MBE throughout your organization by extending it well beyond your PLM environment. Find out how CollectIT can save your time and money.
